Webdevelopment proposal 2

Haulin Mulaudzi

Proposal 2: Johannesburg Fresh Market

Organisation Type: Retail Store

Organisation Status: Fictional

1. Organisation Overview

Name: Johannesburg Fresh Market

Johannesburg Fresh Market is a fictional local retail business that sells fresh fruit, vegetables, dairy products, snacks and other everyday grocery products. The business is aimed at providing customers with convenient access to affordable and quality food products.

The **mission** of Johannesburg Fresh Market is to provide fresh and affordable products while offering friendly and convenient customer service. The **vision** is to become a trusted local retailer that is recognised for quality products, affordable prices and good customer service.

The target audience includes students, families, working adults and local residents in Johannesburg.

The development of an online presence is important because digital technologies can help businesses reach customers and access new markets. The World Bank (2022) notes that e-commerce can help micro, small and medium-sized businesses compete and grow by connecting them with customers and markets.

2. Website Goals and Objectives

The main goal of the website is to create an online presence for Johannesburg Fresh Market and provide customers with useful information about the business and its products.

The objectives of the website are to:

- Introduce customers to Johannesburg Fresh Market.
- Display the different products available.
- Provide information about product prices and special offers.
- Allow customers to make enquiries.

- Provide contact information and store locations.
- Make information about the business easily accessible.

Research has found that websites and other digital capabilities can positively contribute to the marketing capabilities and performance of SMEs (Jean and Kim, 2020).

The World Bank (2023) also reports that digital technologies are transforming business activities and can help businesses engage with customers and improve their opportunities in digital markets.

3. Current Website Analysis

Johannesburg Fresh Market is a fictional organisation created specifically for this academic project. Therefore, the organisation does not currently have a website.

The main weakness is that customers would not have a central online platform where they can find information about the business, products, prices and contact details.

The proposed website will address this problem by providing customers with an organised and easy-to-use source of information. This is particularly relevant because research indicates that having web capabilities can support SME marketing and business performance (Jean and Kim, 2020).

4. Proposed Website Features and Functionality

The website will contain **five main pages**:

Home (index.html)

The homepage will contain:

- Johannesburg Fresh Market logo
- Welcome message
- Introduction to the business
- Featured products
- Navigation menu

About Us (about.html)

The About Us page will contain:

- Business background
- Mission
- Vision

- Business values
- Information about the organisation

Products (products.html)

The Products page will display:

- Fresh fruit
- Vegetables
- Dairy products
- Snacks
- Grocery products
- Product descriptions
- Prices
- Product images

Enquiry (enquiry.html)

The enquiry page will contain a form where customers can submit:

- Name
- Email address
- Telephone number
- Type of enquiry
- Message

Contact (contact.html)

The Contact page will provide:

- Business address
- Additional store location
- Telephone number
- Email address
- Opening hours
- Contact form

A clear navigation structure will be used throughout the website so that visitors can move easily between the five pages.

5. Design and User Experience

The website will have a clean and fresh design that reflects the nature of a grocery and fresh-food retailer.

Colour Scheme: Green, white and orange will be used to create a fresh and welcoming appearance.

Typography: Aptos will be used as the main font because it is clear and easy to read.

Layout: The website will have a consistent navigation menu, headings, paragraphs, images and clearly separated sections.

The website will also consider accessibility and usability when designing the pages. The World Wide Web Consortium's Web Content Accessibility Guidelines provide recommendations for making web content accessible to a wider range of users (W3C, 2023).

Low-fidelity wireframes will be created before development to show the planned structure and information hierarchy of the website.

6. Technical Requirements

The website will initially be developed using **HTML5**. Visual Studio Code will be used to create and edit the HTML files.

The project will contain five HTML pages and an images folder:

Johannesburg-Fresh-Market/

|

└─ index.html

└─ about.html

└─ products.html

└─ enquiry.html

└─ contact.html

|

└─ images/

| └─ logo.png

```
| ├── fruit.jpg
| ├── vegetables.jpg
| ├── dairy.jpg
| └── snacks.jpg
|
└── README.md
```

GitHub will be used to store the project files and track development progress.

7. Timeline and Milestones

Milestone Activity

- 1 Research and project planning
- 2 Sitemap and wireframe creation
- 3 HTML page development
- 4 Content and image integration
- 5 Testing, debugging and final submission

8. Budget

For the academic version of the project, free development tools can be used to create the website. If Johannesburg Fresh Market were to launch the website commercially, the business would need to budget for domain registration, hosting, maintenance and future updates.

The World Bank (2022) highlights the importance of digital technologies and e-commerce in helping small businesses connect with markets and improve their growth opportunities.

The cost of developing a website would depend on the technical skills available, the complexity of the website and the resources required. Louw and Nieuwenhuizen (2020) specifically discuss website development strategies for SMEs and highlight the importance of considering cost and technical skills when planning website development.
