WEB DEVELOPMENT PROJECT PART 1

MULAUDZI HAULIN

Website Project Proposal 1: Braam Bakehouse

1. Organisation Overview

Organisation Name: Braam Bakehouse

Organisation Type: Fictional Small Business – Bakery

Braam Bakehouse is a fictional bakery created for this website project. The bakery is planned as a local business in Johannesburg that sells fresh and affordable baked products. These products include cakes, cupcakes, bread, croissants, pastries and other baked goods.

The mission of Braam Bakehouse is to provide customers with fresh, good-quality and affordable baked products while giving them friendly customer service. The vision is for Braam Bakehouse to become a trusted local bakery that is known for fresh products, good quality and customer satisfaction.

The target customers include students, families, working people and anyone looking for baked products for everyday use or special events such as birthdays, graduations and celebrations.

2. Website Goals and Objectives

The main goal of the website is to give Braam Bakehouse a professional online presence. The website will help customers learn more about the bakery, view its products and make enquiries.

The main objectives of the website are to:

- Give customers information about Braam Bakehouse.
- Display the bakery's products and prices.
- Allow customers to make enquiries online.
- Provide contact information and business locations.
- Make it easy for customers to navigate the website.
- Create an attractive and professional website.

The success of the website will be measured using key performance indicators (KPIs), such as the number of visitors, product views and completed enquiry forms.

3. Proposed Website Features

The website will have **five main pages: Home, About Us, Products, Enquiry and Contact.**

The **Home page** will introduce Braam Bakehouse and show important information about the business. The **About Us page** will provide information about the bakery's story, mission, vision and values. The **Products page** will show the different baked products available. The **Enquiry page** will allow customers to submit questions or make product enquiries. The **Contact page** will provide contact information and locations.

The website will also have a navigation menu that allows users to move easily between the different pages.

4. Design and User Experience

The website will use a warm and simple design that matches the bakery theme. The main colours will be **brown, cream and light orange**. These colours will help create a warm and welcoming feeling.

The website will use clear headings, readable text and simple navigation. The layout will be kept simple so that users can easily find the information they need. Accessibility will also be considered when designing the website because WCAG provides guidelines for making websites easier for different users to access and use (World Wide Web Consortium, 2024).

5. Technical Requirements

The website will be created using **HTML and CSS** in Visual Studio Code. HTML will be used to create the structure of the website, while CSS will be used to improve the appearance and layout.

Images will be stored in a separate **images** folder, while CSS files will be stored in a **css** folder. Images will be obtained from legal sources such as Unsplash (Unsplash, 2026).

The project will also be stored in a private GitHub repository. GitHub will be used to save the website files and keep track of changes made during development (GitHub, 2026).

6. Timeline and Milestones

Milestone	Activity	Duration
1	Research and project planning	4 DAYS
2	Create wireframes and website structure	2 DAY
3	Create the HTML pages	1 DAY

Milestone	Activity	Duration
4	Add website content	1 DAY
5	Test, fix errors and complete the website	3 DAYS

7. Budget

Since this is a student project, most of the development will be completed using free software and resources. If the website were developed as a real business website, costs would include domain registration, hosting and website development. A realistic estimated budget would be **R1 500–R3 000 for development, R150–R300 for a domain, and approximately R600–R1 500 per year for hosting.**
